LiftMetrics

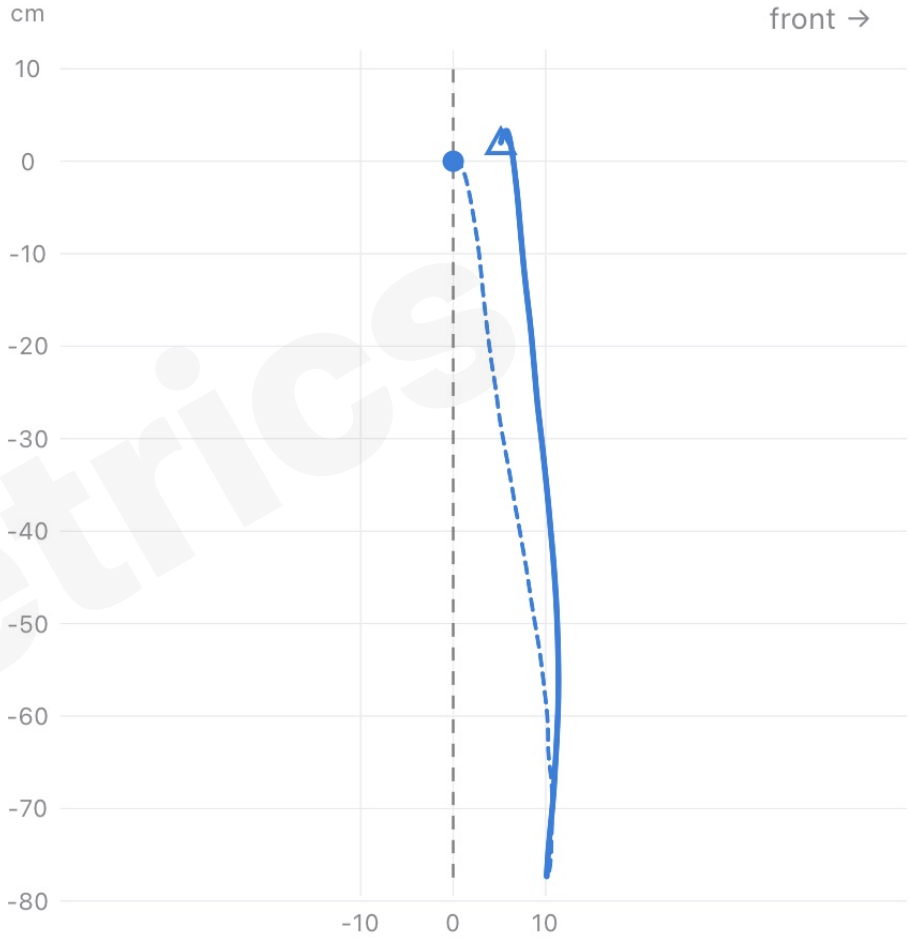

Overlaid bar paths — Back squat

● start · △ finish · dashed: descent · solid: ascent · 10 cm grid, same scale horizontally and vertically.

17:01 · 40 kg
17:07 · 40 kg · rep 1/2
17:07 · 40 kg · rep 2/2

Overlaid bar paths — Front squat

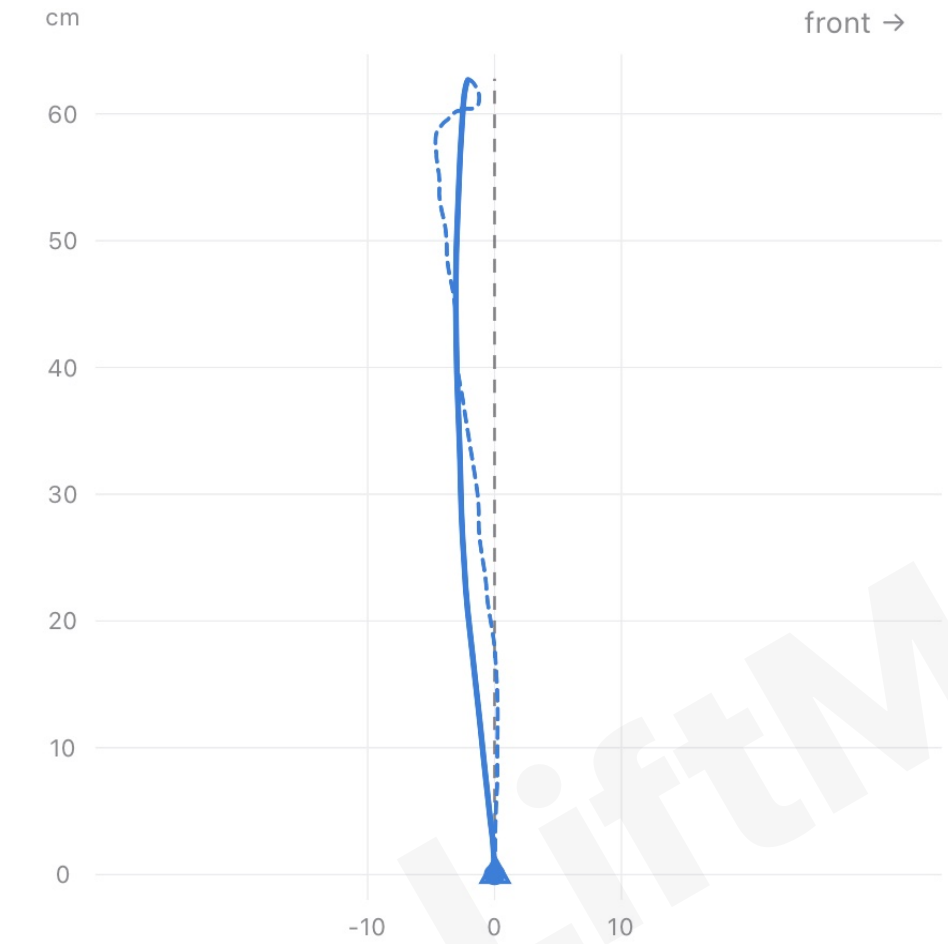

● start · △ finish · dashed: descent · solid: ascent · 10 cm grid, same scale horizontally and vertically.

17:13 · 40 kg

LiftMetrics

Overlaid bar paths — Deadlift

● start · △ finish · dashed: descent · solid: ascent · 10 cm grid, same scale horizontally and vertically.

17:15 · 40 kg

LiftMetrics

How to read these numbers

Goal · to do	Target range for each measurement (adjustable in Settings › Goals). Green = within range · orange = outside but within tolerance · red = beyond. “increase / decrease by X” = gap to close to get back in range.
Overlaid bar paths	All the session's lifts for the movement, from lift-off to the catch, in the same frame of reference (bar start = 0) and the same direction. Color by load, from blue (lighter) to red (heavier); if the loads are almost all the same, by lift order (first in blue, last in red). The legend gives each lift's time and load.
%	Load as % of the lift's 1RM valid on the lift's date (Athletes tab).
Lift (strength)	BSq = Back squat · FSq = Front squat · DL = Deadlift. Rep = position of the rep in the set.
Score /100 (strength)	Vertical bar path 45 points, velocity loss 35, bar tilt 20. A criterion that is not measured is left out of the calculation.
Mean V (mean concentric velocity)	Vertical distance covered during the ascent divided by its duration (m/s). It is the reference measure of velocity-based training: the heavier the load, the lower it gets.
Peak V (strength)	Peak vertical velocity during the ascent (m/s).
Loss	Mean velocity loss compared with the fastest rep of the set (ref.). Shows fatigue within the set. goal ≤ 20 %, orange up to 10 % outside, red beyond.
Range of motion	Vertical distance travelled by the bar between the lowest and highest point (cm).
Drift	Largest horizontal gap between the bar and its starting position (cm): a truly vertical path gives a small value. Squat: goal ≤ 5 cm, orange up to 3 cm outside, red beyond · Deadlift: goal ≤ 4 cm, orange up to 3 cm outside, red beyond.
Ascent	Duration of the ascent (s).
Power	Mean power of the ascent (W), computed with the load.
